ELEVATION
SURFACE-X

THE SURFACE-X COLLECTION

Extraordinary spaces. Seamlessly renewed.

Architectural overlays. Waterproof possibilities.
Inside and out.

Keep the place.
Change the possibility.

Elevation Surface-X is a thin, hand-troweled mineral and polymer overlay for suitable existing surfaces. Bring tired concrete into the present, connect your interior and terrace, or create a cohesive material story around a pool.

EXPLORE THE COLLECTION

Applications & architectural finishes 03–12
Transformation studies 13–14
System planning & waterproofing 15–17
Finish collections & colors 18–23
Protection, care & your next project 24–26

More than a patio overlay.

A coordinated finish can connect the places you gather, move, relax, and entertain.

Patios & overlays

Pools & coping

Inside, out

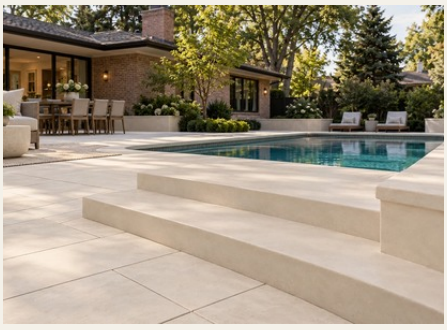

Walls & facades

Decks & balconies

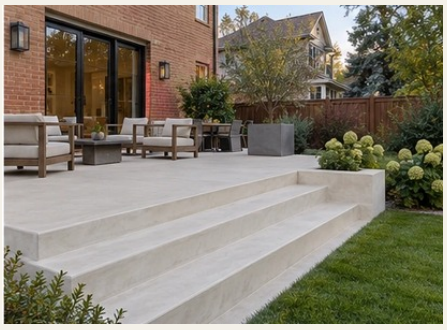

Water features

Precast surfaces

Liquid Membrane

Sealing & care

Your patio. Reimagined.

Refresh dated stamped concrete or a worn slab with a quieter palette and a hand-finished architectural surface.

APPLICATIONS

Patios, courtyards, entries and walkways. Coordinate adjoining steps and low walls for a considered outdoor room.

SPECIFY WITH INTENT

Inspect bond, moisture, cracks and drainage. Remove contamination and weak coatings. Repair stable defects and retain required movement joints.

One cohesive poolscape.

Bring the deck, coping and surrounding architecture into one material composition.

APPLICATIONS

Choose complementary tones for deck and coping. Shape clean transitions around steps, curved edges and outdoor lounge areas.

SPECIFY WITH INTENT

Repair weak coping and verify bond-beam condition first. Specify wet traction, drainage and edge details. Pool interiors require a separate approved submerged assembly.

One material language.

Coordinated color. Purposeful texture. A considered transition from interior comfort to open-air living.

APPLICATIONS

Connect living areas, terraces, fireplaces and selected walls. Refine the texture for each setting while keeping a related palette.

SPECIFY WITH INTENT

Allow for thresholds, weather exposure and drainage. Interior and exterior textures may differ to meet traction and performance needs.

Architecture, softened.

A tactile mineral finish gives walls, entries and sculptural surfaces a calm architectural presence.

APPLICATIONS

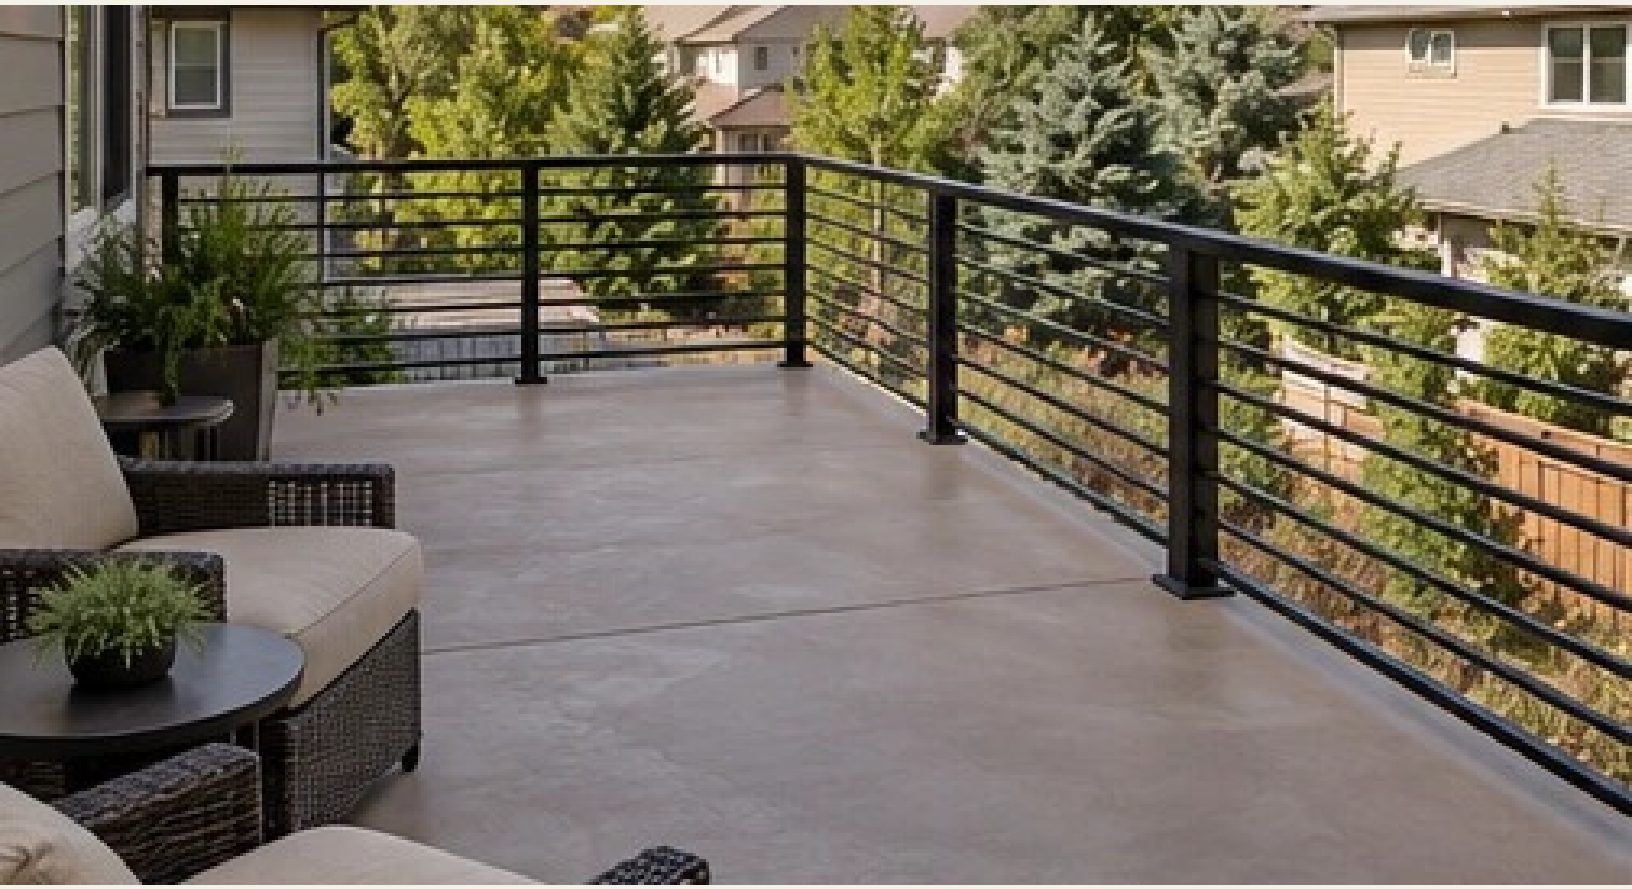

Facades, courtyard walls, fireplaces and architectural accents. Use light and shadow to reveal hand-applied texture.

SPECIFY WITH INTENT

Surface-X is an architectural coating over an approved substrate. Coordinate flashing, drainage, weather barriers, terminations and movement joints.

Big design. Thin finish.

Bring the concrete aesthetic to approved terrace, rooftop and deck assemblies where finished height matters.

APPLICATIONS

Unify elevated outdoor rooms with stairs, walls and the landscape below. Pair refined surfaces with intentional railing details.

SPECIFY WITH INTENT

Verify framing capacity, stiffness, sheeting, fastening and slopes. Detail waterproofing, edges, drains and railing penetrations. Open deck boards need an approved assembly.

Designed around water.

Fountains, reflection basins and architectural waterfalls become part of the same material story.

APPLICATIONS

Select quiet stone tones or deeper colors that amplify reflections. Coordinate the basin, surround and adjoining landscape.

SPECIFY WITH INTENT

Locate leaks and repair structural failures first. Detail corners, transitions and penetrations. Use the approved submerged specification and complete cure before filling.

A new life for precast.

Refine existing coping, steps, caps and walls with a coordinated architectural finish.

APPLICATIONS

Precast pool edges, stair treads and risers, wall caps and selected vertical faces. A continuous palette can calm a mix of existing elements.

SPECIFY WITH INTENT

Confirm sound concrete and secure components. Repair spalls and damaged edges, preserve joints, and coordinate water shedding, wet traction and compatible protection.

Protection beneath the possibility.

A liquid-applied elastomeric waterproofing and anti-fracture layer for suitable interior, exterior and submerged assemblies.

APPLICATIONS

Specify beneath an approved finish, or as an exposed colored membrane where the system allows. Coordinate waterproofing with the complete assembly.

SPECIFY WITH INTENT

Pool and water-feature work needs the current submerged specification. A decorative overlay and a waterproofing membrane serve different roles.

Protect the finish you fell in love with.

Match protective coatings to exposure, traffic, desired sheen and the complete finish system.

APPLICATIONS

Choose from Elevation Matte Shield, Gloss Shield, Satin Shield and Natural Shield. See page 24 for selection and care.

SPECIFY WITH INTENT

Confirm compatibility and wet-use traction. Sealing protects a finish; waterproofing manages water. Establish a maintenance plan for the specified coating.

The bones stay.
The story changes.

A dated patio, renewed

A poolscape, reimagined

Change the surface.
Keep the character.

A house facade, refined

An outdoor kitchen, unified

Beauty, built in layers.

Approximately 1/8 inch (3 mm) of finish. Preparation, leveling and the specified assembly can increase total build-up.

01 Compatible protective finish

02 Surface-X color & texture

03 Liquid Membrane, where specified

04 Prepared, sound substrate

THE SUBSTRATE SETS THE STANDARD

A finish cannot restore structural capacity or stop active movement. Preserve designed expansion joints. Plan moisture, drainage, transitions, penetrations and protection before selecting the final color.

Schematic only. Layer order and details vary by approved application. Thicknesses are not shown to scale.

Specify for the setting.

Every application starts with the existing surface, intended use and environmental exposure.

Sound concrete / stamped concrete Patios, pool decks and floors	Coating removal, cracks, moisture, joints and drainage.
Secure tile / stone Selected floors, walls and wet areas	Bond testing, grout preparation, leveling and contamination.
Stable brick masonry Selected architectural surfaces	Loose units, mortar and movement; stabilize loose pavers first.
Cement board / approved sheeting Walls, decks and joinery	Fastening, stiffness, joints and exterior suitability.
Plywood / timber Selected engineered assemblies	Structural capacity, deflection, approved substrate and waterproofing.
Pool plaster / gunite / concrete Submerged membrane renewal	Shell condition, fittings, preparation, full cure and chemistry.

Water demands a complete specification.

SUBMERGED WORK

The website’s current exposed pool-membrane guidance calls for three approximately 20-mil coats (60 mil total), matching Color Activator, and at least seven days of cure before filling. Conditions can extend cure. Confirm the current system sheet for each project.

DETAIL THE TRANSITIONS

Coordinate corners, drains, thresholds, flashing, penetrations and positive slope. An added Surface-X finish requires its own approved submerged assembly. Maintain balanced pool chemistry and follow chemical-dosing guidance.

Planning guidance, not an installation specification. Obtain the approved assembly, coverage, thickness measurement basis, cure conditions and application instructions before work begins.

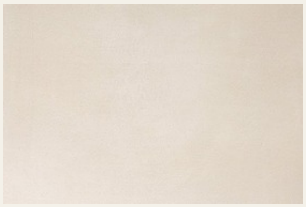

Five ways to finish.

Color is only half the story. Texture, light and protective sheen shape the finished character.

Corsa

Smooth, restrained trowel movement and subtle tonal variation.

Vellum

Delicately textured character. Specify and verify traction for the complete assembly.

Solid

A more uniform, monochromatic composition.

Polished

Buffed, lustrous character with stronger tonal contrasts.

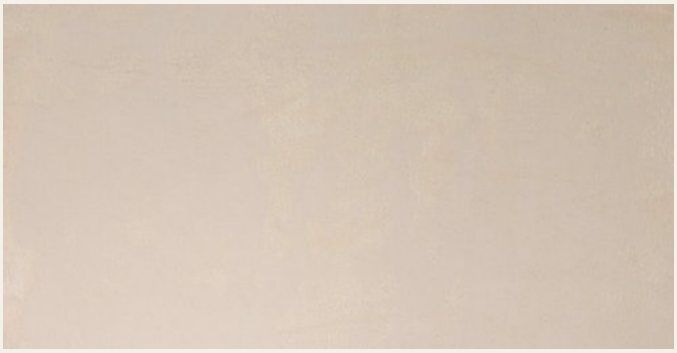

Grain

Tactile, unpolished, vein-like texture inspired by stone.

Corsa.

Smooth, restrained trowel movement and subtle tonal variation.

Taupe Grey

Polar Bear

Phantom

Mojave

Modern Grey

Baked Clay

Website collection swatches. Screen color, lighting, hand application and sealer affect appearance. Approve a physical sample and on-site mock-up. Verify finish suitability for the intended use.

Vellum.

Delicately textured character. Specify and verify traction for the complete assembly.

Taupe Grey

Montego Stone

Dried Herb

Espresso Bean

Website collection swatches. Screen color, lighting, hand application and sealer affect appearance. Approve a physical sample and on-site mock-up. Verify finish suitability for the intended use.

A finish worth protecting.

Choose the protection for the surface, exposure, traffic and desired sheen.

Elevation Matte Shield

Water-based polyurethane-hybrid protection with a restrained matte character.

Elevation Gloss Shield

Higher-sheen polyurethane-hybrid protection.

Elevation Satin Shield

A protective satin system.

Elevation Natural Shield

Penetrating protection for suitable porous surfaces.

CARE THAT FITS THE SYSTEM

Use compatible neutral-pH cleaners and avoid abrasive cleaning. Review the specified sealer maintenance cycle. For wet areas, confirm the complete assembly’s traction; for pools, maintain balanced chemistry.

A separate palette.

Membrane colors are a separate collection from Surface-X finish colors. Display colors below are approximate.

Semi-Clear

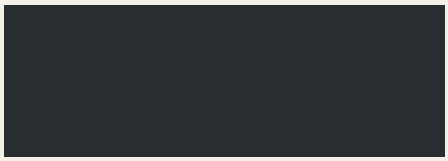

White

Rockslide Grey

Monday Grey

Black Pearl

Cove Blue

Sapphire Bay

Sandy Beige

Honey Maple

Arizona Sun

Brown Slate

Sequoia Brown

Barn Red

Hunter Green

Elevation Orange

Semi-Clear is a translucent option. Approve physical samples and the specified membrane system before ordering. Membrane color does not establish finish compatibility or submerged-use approval.

See what your space could become.

START WITH YOUR EXISTING SURFACE

Bring photos, approximate dimensions, the project address and a few inspiration images. Include visible damage, edges, drains and transitions so we can connect the design with the right assembly.
